Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8, are rejected under 35 U.S.C. 102(e) as being anticipated by Nagasuka et al, US. Pat. No. 6,615,364.

3. Claims 1, 4, 5, 6, 7 and 8, Nagasuka teaches a method for starting a computer system [abstract] that adopts virtual memory management [Fig. 2] whereby in which areas of a main storage individual areas of virtual memory are placed is specified by using an address translation table [address translation table Fig. 2], comprising the following steps:

a) dividing the main storage into a first main storage area that should be initialized and a second main storage area that should not be initialized at the time when the system is started [primary paging device unit 710 and secondary paging device unit 720 of Fig. 1];

b) dividing the individual areas of the virtual memory into a first virtual area that utilizes said first main storage area and a second virtual area that utilizes said second main storage area [Fig. 2];

c) allocating an area belonging to the first main storage area to said first virtual area in response to a request for main storage allocation thereto [Fig. 2, col. 4, lines 9-36];

d) allocating an area belonging to the second main storage area to said second virtual area in response to a request for main storage allocation thereto [*Fig. 2, col. 4, lines 9-36*]; and

e) initializing the contents of the first main storage area and retaining the contents of the second main storage area at the time when the system is started [*abstract, col. 7, lines 63-65*].

4. Claim 2, Nagasuka teaches the step of designating either of a part of the main storage area whose memory addresses are lower than a previously specified address or a part of the main storage area whose memory addresses are not lower than that address as the first main storage area and also designating the rest of the two parts as the second main storage area [*Fig. 2, col. 4, lines 9-63*].

5. Claim 3, Nagasuka teaches the step of dynamically allocating part of the main storage to each of the individual areas of the virtual memory depending on an attribute borne by each individual area of the virtual memory [*col. 4, lines 9-16 and 23-36*].
